COVID-19 vaccination is recommended in pregnancy. Vaccination is the best way to protect yourself and your unborn baby from the known risks of COVID-19 during pregnancy.

COVID-19 vaccines are safe in pregnancy

- COVID-19 vaccines do not contain ingredients that are known to be harmful to pregnant people or to a developing baby. Ingredients do not cross the placenta or reach the baby.
- COVID-19 vaccines cannot give you or your baby COVID-19 disease.
- Vaccination in pregnancy is associated with NO increased risk of:
  - Miscarriage
  - Preterm birth
  - Stillbirth
  - Complications at birth
  - Congenital abnormalities
  - Baby being born smaller than expected

COVID-19 vaccines are effective in pregnancy

- Very good at protecting against moderate and severe COVID-19 disease.
- Vaccination during pregnancy may give your baby protection against COVID-19 once they are born.

You don't have to wait for a particular time in your pregnancy to get the COVID-19 vaccine. You can get vaccinated as soon as possible when it's convenient for you.

Evidence from 13 studies, in 5 countries, including 101,761 people vaccinated in pregnancy
