

Inactivated vaccines

Contain **killed SARS-CoV-2 virus**.

The killed virus is recognised by the immune system to trigger a response without causing illness.

This response builds immune memory, so your body can fight off SARS-CoV-2 in future.

Considerations

May need to be administered with an adjuvant to boost immune response.

Examples in human use for other disease

Influenza vaccine

Approved elsewhere in the world for COVID-19

Sinovac, Sinopharm, Bharat Biotech

In clinical trials for COVID-19

Shifa-Pharmed, Chinese Academy of Medical Sciences
